1. In bacteria a nucleus is not observed but do have genetic material. They do not contain membrane covered cell organelles but carry out all the cellular activities like the cells of higher organisms. Some bacteria have photosynthetic pigments but chloroplasts do not occur. A cell wall occurs on the outside but it does not contain cellulose. Flagella can be present but they are quite different from flagella of other organisms.

 - ii) Where are photosynthetic pigments located in photo- autotrophic bacteria?
 - iii) Bacterial cell wall is formed of which kind of substance?
 - iv) Bacteria belong to prokaryotes. Justify it.
